Welcome

WebIT Professionals is a web development agency built on our passion for web based solutions. We partner with a group of extremely experienced professionals to design, develop and implement all aspects of a solution. Our philosophy is based on the same principals as yours, serving clients in the most efficient and effective way.

We are building a team of experienced professionals that will allow us to always find the right solution for your needs so we can serve you better.

History

After 8 years of experience working for other agencies, we've decided to start up our own company. Originating from Sarajevo, the capital of Bosnia & Herzegovina and the Olympic City (XIV Winter Olympic Games in 1984), I came to the United States in 1999 and worked my way up, experiencing the American dream through a variety of companies and jobs for the past 12 years. At this point, all of my knowledge and experience combined with that of my associates should work for all parties involved doing business with us.

Mission

Finding the best, most efficient solution for our clients, is our primary goal. Perfection is achieved by following a set of rules within our process and deep, detailed collaboration with the clients and professionals we're working with.

Process

We believe in asking questions, not assuming any answers. Ideal System Development Life Cycle is one smooth, straight line which is easily achieved by following correct steps. It may take a little bit more time to do it right, but the payoff is huge; execution is planned and perfected, so the actual hands-on implementation is closer to that smooth, straight line and the end-result is effective and efficient solution sought by our clients.

1

Relevant Information

The information technology is constantly changing on a daily basis and the end-result expectations are very high in this business. We plan to stay on top of things, using our clientele and internet as resources, as well as constantly searching for better ways to communicate and implement our client's solutions. Our strength is the ability to quickly adapt to current trends and analyze anything you can think of, in order to create information architecture, database and solution structures that are manageable, scalable and efficient. With your help, we can do everything.

Team

We have professionals that will take your ideas and create an incredible visual presence for your company, brand or campaign. 10+ years of experience, graphic design and art degrees would definitely be enough for the visual quality we are capable of providing.

Developers who can build secure, very complex applications with 8+ years of experience in the business doing analysis, information, database and solution architecture, will be available to you for consulting & analysis and/or full development cycle and implementation.

Experience is the key and we have it.

Clients

Since we're just started, we don't have our own clients yet, but through the companies we have worked for in the past, we worked on many projects: FB applications, informational sites, campaigns and e-Commerce systems built from scratch, API integration or building one; this was part of our daily routine.

Just to mention a few clients where we were part of the team working on a project:

Google, Microsoft, McDonalds, Boeing, Avista Utilities, Cricket, Nestle, General Motors, ATT, Dole, AMEX, JanSport, Aveda etc.
